# What are 3D Wall Panels?

QTD take it's outdoor product experience and quality indoors with their 3D Wood Decorative Wall Coverings. The world's new trend in interior decorative coverings that embellish your interior walls and ceilings by modernising the traditional look of wood in three-dimensions. 3D Wall panel collections are also used in furniture design.

The 3D Wall panel tiles give your home a unique design, warmth and exquisite look provided by the high standard quality principles of QTD.

3D Wall panel covering products are very easy to apply and will enhance your interior walls or ceilings with the various patterns and wood options.

## **Pack Contents**

Each panel measures 300 x 300mm and there are 11 panels in a box to cover an area 1m<sup>2</sup>. Every unique panel is made from solid wood and stuck to a fine mesh grid in the same way as mosaic bathroom tiles are supplied.

## **Installation**

Each panel is simply stuck onto a clean and dry surface butting up each panel to the next with a suitable wood adhesive to produce a stunning wall feature.

To fill in small spaces simply turn the panel over and score the mesh with a sharp knife. Further fine trimming can be done with a trim saw or jigsaw and cleaning the cut edges with a piece of sandpaper.

## **Where to use them**

The options are endless, e.g. A section or complete wall behind your bed, TV surround, Stair walls or any feature wall residential or commercial to break up large wall spaces.

## **Sound insulation properties**

These are excellent for use in a music room or areas where you wish to reduce sound travel as the panels will absorb noise instead of it bouncing off walls. Typical areas are painted walls and tiled floors.
